

SEE BETTER • FEEL BETTER • FUNCTION BETTER

### WalaControl

Manually Control some or all of your WalaLight system wirelessly. This control can be locked into a wall plate covering a standard junction box for wall mounted controls, flush mounted on a wall or used independent as a handheld control. These controls override the automated WalaLight system allowing user control of on/off, dimming and kelvin temperatures. Alternatively, these manual controls can be used without the automated control system for pure wireless manual control of your WalaLight fixtures.
